NOTICE FIREPLACE

CAST IRON FIREPLACE

Our cast iron products feature a 1-year warranty on condition that the recommendations below are respected.

Installation :

Your fireback must be firmly maintained at the back of the fireplace. It is advised to fix it using swallowtails with or without brass pegs. Leave a 5 mm space between the fireback and the wall for dilatation.

First use :

1. For the first heating, use a few split logs and a firelighter.
2. Do not use crate or pallet wood. Do not use vine shoots.
3. Begin with 3 or 4 small fires at the beginning of the season in order to eliminate any moisture accumulated off-season. Renew the process each time you have not heated for a prolonged period.

Use and maintenance :

- Logs must be placed gently in order to avoid any shock to the fireback.
- Make sure the fireback is protected when the weather is wet.
- Never throw water to extinguish a fire, so as to avoid thermal shock.
- By following these simple recommendations, you will be satisfied by your fireplace fireback for decades to come.

INSTALLATION OF WALL ANCHORS FOR FIXING YOUR DECORATED CAST IRON PLATE TO THE WALL

Position the plate against the wall as required. Determine the location of the wall anchors within the top third of the plate or under the shoulder.

WITH BRASS PLUG

1. Using a drill bit suitable for concrete, drill a 10mm hole, at 5mm from each side of the plate.
2. Insert the brass plug into the hole.
3. Screw the wall anchor into the brass plug.
4. Leave 3mm to 4mm between the anchors and the plate to allow for heat expansion.

WITHOUT BRASS PLUG

1. Using a drill bit suitable for concrete, drill a 12mm to 14mm diameter hole, at 5mm from each side of the plate.
2. Use refractory cement to seal the wall anchor.
3. Leave 3mm to 4mm between the anchors and the plate to allow for heat expansion.
